

Step Up Your Security Awareness with End User Training

From small non-profits to global corporations and everything in between, the most valuable asset in any organization remains the same – its employees. Unfortunately, these same folks are often the weak link in the cybersecurity defense chain. We can change that.

Omega Systems' End User Security Awareness Trainings result in meaningful, sustainable changes in any workplace AND empower your employees to be your best internally-protective asset.

Always-Aware Cybersecurity Mindset

Regardless of their learning level or position within your company, our inspired, live training sessions engage your employees with a customized mix of content. Our curriculum is developed from an ever-evolving arsenal of the latest cybersecurity trends.

Learn From the Defenders

Omega System' team of security-conscious Engineers has first-hand knowledge of today's threat landscape. They leverage trusted cybersecurity product studies and experience to reinforce their real-life scenario curriculum.

- Decrease Workforce Phishing
- Fulfill Security Awareness Training to Meet Compliance Requirements
- Recognize the Latest Methods Hackers Use to Gain Corporate Access
- Improve and Reinforce Company-wide IT Security Policies and Procedures

Real-World Threat Learning

Our user training covers best practices to defend against threats facing your organization right now. The customizable mix of content is tailored to meet your awareness training goals. We cover real-time topics, like advanced cyberattacks and tactics, social engineering, malicious downloadable content, information leaks, illegal online activity, and more. We train beyond generalized industry-specific security awareness to address relevant threats and security concepts that are critical to your specific work environment.

- Compliance Training
- Dedicated and Personalized Client Support
