

# Stay Alert with Customized Quick-View SIEM Alerts and Reporting

Effective Security Information and Event Management (SIEM) solutions provide banks and financial institutions with critical network security intelligence and real-time monitoring for network devices, systems, and applications.

With the right SIEM tools, IT administrators can mitigate sophisticated cyberattacks, identify the root cause of security incidents, monitor user activity, thwart data breaches and meet regulatory compliance requirements.

## Customized Graphical Reports Save Time and Frustration

Omega Systems provides the detailed reports needed for compliance reviews, but for weekly analysis and justified decision making, we simplify.

## Leverage Log Analytics for Practical Use

Your IT infrastructure includes a unique mix of network equipment, servers, storage and business-critical applications that generate terabytes of log data. Omega Systems' customized SIEM reporting and alerting uses all of that data to give you powerful insights into your specific environment. You will easily identify user behaviors, network anomalies, system downtime, policy violations, internal threats, and more.

Our SIEM reporting and alerting is never canned or stale. We use robust log analysis and monitoring tools to compile and index your log data. Then, we filter it with real-time, *daily updated* threat analytics. This process ensures our threat intelligence stays fresh and relevant, progressively growing more intuitive every day!

## Customized, snap-shot style reports of actionable information are graphically represented any way you prefer to see them.

- Brute Force Login Detection
- Windows Audit Policy Change
- Security Group Deletion
- Active Directory Changes
- Server Logins
- File Backups
- Network Threat Feed
- Privileged Logins
- File Access, Deletion or Denial
- Failed or Interactive Logins

Omega Systems' SIEM Alerts and Reports listed above are commonly requested. Additional custom dashboards are available upon request.
